

VH1 series general frequency converter Simple operation manual

Thank you for using this product. This fast manual provides relevant information about VH1 series variable frequency drives. Please read this manual carefully before use to ensure the correctness of installation and use. More detailed information about VH1 series frequency converter (parameters, alarms, etc.) can be found in the VH1 frequency inverter manual.

Product information

Naming rule

VH1 - 4 0.7G/1.5P - B

(1) (2) (3) (4) (5)

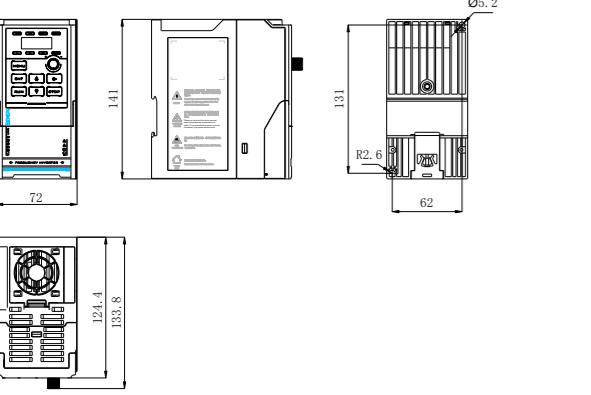

Code	Description
(1)	Product identification VH: General frequency converter
(2)	Product series 1: Open-loop vector frequency converter
(3)	Input voltage level 4: AC 380V 2: AC 220V
(4)	Power level P: Light load G: Heavy load
(5)	Braking unit B: built-in braking unit Vacant: no

Technical specification

Model VH1- <u> </u> -B	20P4	20P7	40.4G/ 0.7P	40.7G/ 1.5P	41.5G/ 2.2P
Adaptive motor (kW)	0.4	0.75	0.4	0.75	1.5
Input rated current (A)	5.4	5.6	1.9	3.4	5.0
Power supply capacity (kVA)	1	1.5	1	1.5	3.0
Output rated current (A)	2.3	4.0	1.5	2.1	3.8

Mounting dimension (Unit : mm)

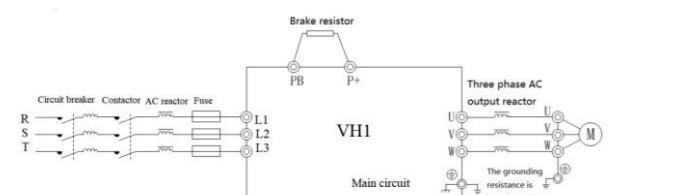

VH1-20P4, 20P7, 40.4G/0.7P, 40.7G/1.5P, 41.5G/2.2P-B

Note: The installation screw is M4.

VFD system terminal wiring

Main circuit wiring

Definition of main circuit terminals

- VH1-20P4, 20P7, 40.4G/0.7P, 40.7G/1.5P, 41.5G/2.2P-B

Instructions of main circuit terminals

Terminal	Name	Description
L1,L2,L3	Three phase power supply input	AC three phase power supply input
2	B	485 communication terminal
3	24V	Without isolation
4	COM	X1-X5 Bidirectional input, 24V and COM are short circuited to form NPN input
5	X1	U,V,W VFD output terminal Connect to the three phase motor
6	X2	PE Grounding terminal Connect to the ground
7	X3	P+ PB Brake resistor terminal Connect to the brake resistor
8	X4	The operating frequency is timed by the panel potentiometer to adjust the frequency.
9	X5	
10	0V	1. High input voltage 2. There is external force to drive the motor during acceleration 3. Acceleration time too short 4. There is no additional brake unit and brake resistor
11	Y1	1. Adjust the voltage to the normal range 2. Cancel additional force or add brake resistor 3. Increase acceleration time 4. Add brake unit and resistor
12	TA	1. Pole position detection failed 2. The deviation between the motor parameters and the actual value is too large
13	TB	1. Brake resistance short circuit 2. The selection of frequency converter is too small
14	10V	1. Increase the torque limit (P6-11) 2. Reduce the load
15	A11	1. Whether the load is too large or the motor stalls 2. The selection of frequency converter is too small
16	A12	1. Reduce the load and check the motor and mechanical condition 2. The selection of frequency converter is too small
17	GND	1. Reduce the load and check the motor and mechanical condition 2. The selection of frequency converter is too small
18	AO	1. The upper computer is not working properly 2. The communication cable is abnormal 3. Incorrect setting of communication parameter group PC

Note:

- Input power supply L1, L2, L3/L1,L3**
1) There is no phase sequence requirement for input side wiring of frequency converter.
2) Circuit breaker, contactor, AC reactor, fuse, brake resistor and output reactor are optional parts. Please refer to chapter 6 for details.
- P+, PB**
1) Refer to the recommended value for brake resistance selection, and the wiring distance is less than 5m, otherwise the inverter may be damaged.

Output U, V, W

- Please refer to chapter 6 for output cable.
- No capacitor or surge absorber can be connected to the output side of the inverter, otherwise the inverter will be damaged.
- When the length of motor cable is more than 100m, it is easy to produce electrical resonance due to the influence of distributed capacitance, so it is necessary to install AC output reactor near the frequency converter.

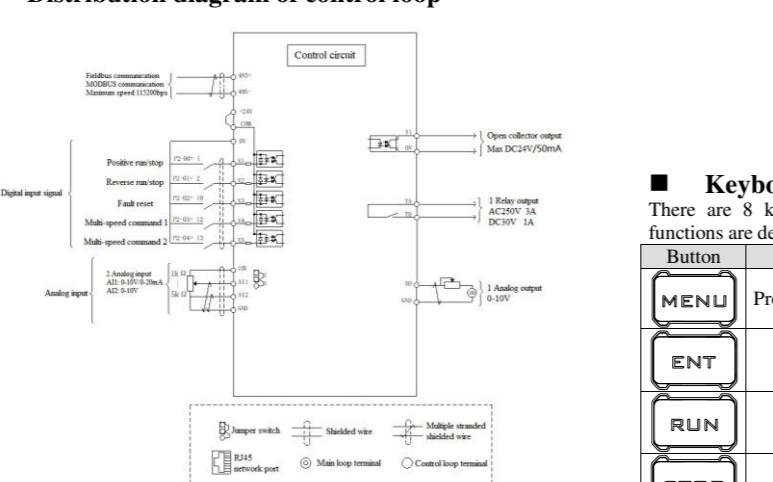

Grounding terminal PE

- The terminal must be reliably grounded, and the grounding resistance must be less than 10Ω. Otherwise, the equipment will work abnormally or even be damaged.
- It is not allowed to share the grounding terminal PE and the power zero cable N terminal.
- The impedance of protective grounding conductor must meet the requirement of withstanding large short-circuit current in case of fault.
- The size of protective grounding conductor shall be selected according to the table below.

Cross section area of a single phase line (S)	Minimum cross section area of protective conductor (S _p)
S≤16mm ²	S
16mm ² <S≤35mm ²	16mm ²
35mm ² <S	S/2

5) Yellow and green cable must be used for protective grounding.

Distribution diagram of control loop

Keyboard function description

There are 8 keys on the frequency converter operation panel, and the functions are defined as follows:

Definition of control loop terminals

TA TB X4 X5 Y1 A12 A11 GND A0

X1 X2 X3 24V COM 0V 10V B A

Button	Name	Function
	Decrease	Decrease the value or pause frequency in operation
	Shift/monitor	In the editing state, you can choose to set the modification bit of the data; in other states, you can switch the display state and monitor parameters
	Frequency setting	The operating frequency is timed by the panel potentiometer to adjust the frequency.

LED and indicator description

There are 5-digit 7-segment LED digital tubes, 4 status indicators and 4 unit indicators on the inverter operation panel.

The four status indicators are located above the LED tube, from left to right: RUN, REV, REMOT, TUNE. The following table describes the indicator lights.

Indicator lights	Meaning	Function
RUN	Operation indicator	ON: running OFF: stop
REV	Forward/reverse operation indicator	ON: reverse operation OFF: forward operation Flashing: status switching
REMOT	Command source	OFF: panel start/stop ON: terminal start/stop
TUNE	Tuning indicator	Flash slowly: tuning status Flash quickly: fault status ON: torque status

The four unit indicators are located below the LED digital tube, from left to right: V, A, Hz, R/MIN. The following table is a description of unit indicators.

Indicator lights	Meaning	Function
V	Voltage	ON: Display voltage
A	Current	ON: Display current
Hz	Frequency	OFF: Display frequency
R/MIN	Speed/%	ON: Display speed Flash: Display %

The use of the operation panel

Keyboard layout

Fault alarm processing

When the inverter is abnormal, the LED digital tube will display the function code and its content of the corresponding fault, the fault relay will act, and the inverter will stop output. In case of fault, if the motor is rotating, it will stop freely until it stops rotating. The possible fault types of frequency converter are shown in the table.

Note: When the frequency converter malfunctions, the user should first follow the prompts in this table for inspection and record the fault phenomenon in detail.

Code	Name	Reason	Solution
over current		circuit in the output circuit of frequency converter	2. Tuning of motor parameters 3. Adjust the voltage to the normal range
		2. The control mode is vector control without self learning	4. Cancel sudden loading
		3. The voltage is low	5. Choose the frequency converter with higher power level
		4. Is there sudden load in operation	
		5. The selection of frequency converter is too small	
Err20	Wave by wave current limiting fault	1. Whether the load is too large or the motor stalls 2. The selection of frequency converter is too small	1. Reduce the load and check the motor and mechanical condition 2. Choose the frequency converter with higher power level
Err21	Acceleration overvoltage	1. Adjust the voltage to the normal range 2. There is external force to drive the motor during acceleration 3. Acceleration time too short 4. There is no additional brake unit and brake resistor	Re-determine the motor parameters, focusing on whether the motor rated current is too small
Err23	Brake resistance short circuit	1. Increase acceleration and deceleration time 2. Reduce the load	1. Increase acceleration and deceleration time 2. Reduce the load
Err26	SVC stall fault	1. Excessive load 2. Torque limit too small (P6-11)	1. Reduce the load 2. Increase torque limit
Err43	External fault	1. Input the signal of external fault through multi-function terminal X 2. Input external fault signal through virtual Y function	Reset and run again
Err44	Communication (timeout)	1. The upper computer is not working properly 2. The communication cable is abnormal 3. Incorrect setting of communication parameter group PC	1. Check the upper computer wiring 2. Check the communication cable 3. Setting communication parameters correctly
Err45	EEPROM read/write error	EEPROM chip damaged	Replace the main circuit board
Err46	Operation time arrival	The accumulated running time reaches the set value	Use the parameter initialization function to clear the record information
Err47	Power on time arrival	The accumulated power on time reaches the set value	Use the parameter initialization function to clear the record information
Err48	User defined fault 1	1. Reset fault 2. Adjust the voltage to the normal range 3. Contact us	Reset and run again
Err49	User defined fault 2	1. Set this parameter correctly 2. Reduce the load and check the motor and mechanical condition 3. Choose the frequency converter with higher power level	Reset and run again
Err50	PID feedback lost in operation	PID feedback is less than P7-27 setting value	Check PID feedback signal or set P7-27 to an appropriate value
Err51	Switch motor in operation	In the process of inverter operation, change the current motor selection through the terminal	Switch the motor after the frequency converter stops
Err52	Speed offset too large	1. Encoder parameter setting incorrect 2. Check whether the machine is abnormal 3. Check whether the wiring between frequency converter and motor is abnormal	1. Setting encoder parameters correctly 2. Check whether the machine is abnormal 3. Check whether the wiring between frequency converter and motor is abnormal
Err53	Motor overspeed fault	1. The ambient temperature is too high 2. Air duct blocked 3. The fan is damaged 4. Module thermistor damaged 5. Inverter module damaged	1. Reduce the ambient temperature 2. Clean the air duct 3. Replace the fan 4. Replace the thermistor 5. Replace inverter module
Err54	Motor overheat fault		

Common parameter

Group P0: Basic functional parameters			
Parameter	Name	Setting range	Default value
P0-01	First motor control mode	0: VF control mode 1: No speed sensor vector control (SVC)	0
P0-02	Operation command channel selection	0: Operate panel 1: Terminal 2: Communication port	0
P0-03	Main frequency source A selection	0: Digital set (Power-off no memory) 1: Digital set (Power-off memory) 2: AI1 3: AI2 4: Body panel knob set 5: Terminal pulse X4 set 6: Communication set 7: Multi-segment instruction set 8: PID set 9: Simple PLC operation 10: Special mode for drawing and winding 11: External pilot panel knob set	0
P0-04	Auxiliary frequency source B selection	0: Digital set (Power-off no memory) 1: Digital set (Power-off memory) 2: AI1 3: AI2 4: Body panel knob set 5: Terminal pulse X4 set 6: Communication set 7: Multi-segment instruction set 8: PID set 9: Simple PLC operation 10: Special mode for drawing and winding 11: External pilot panel knob set	0
P0-05	Frequency source superposition selection	Ones bit: frequency source selection 0: Main frequency source A 1: Calculation results of main and auxiliary frequency sources 2: Switching between main frequency source A and auxiliary frequency source B Tens bit: the operation relationship of main and auxiliary frequency sources 0: A+B 1: A-B 2: max (A, B) 3: min (A, B)	00
P0-06	Auxiliary frequency source B range selection	0: Relative to the maximum frequency 1: Relative to the main frequency source A	0
P0-07	Auxiliary frequency source B range	0%~150%	100%
P0-09	Digital set of auxiliary frequency source offset	0.00Hz~max frequency P0-13	0.00Hz
P0-10	Preset frequency	0.00Hz~max frequency P0-13	50.00Hz
P0-12	Frequency shutdown memory selection for digital set	0: No memory 1: Memory	1
P0-13	Max output frequency	50.00Hz~600.00Hz	50.00Hz
P0-14	Upper limit frequency source	0: Set by P0-15 1: AI1 set 2: AI2 set 3: Body panel knob set 4: Pulse set 5: Communication set	0
P0-15	Upper limit frequency	Lower frequency P0-17~Max output frequency P0-13	50.00Hz
P0-16	Upper limit frequency offset	0.00Hz~ Max output frequency (P0-13)	0.00Hz
P0-17	Lower frequency	0.00Hz~ Upper limit frequency (P0-15)	0.00Hz
P0-18	Acceleration time 1	0~6500s (PC-09=0) 0.0~6500.s (PC-09=1) 0.00~650.00s (PC-09=2)	Model setting
P0-19	Deceleration time 1	0~6500s (PC-09=0) 0.0~6500.s (PC-09=1) 0.00~650.00s (PC-09=2)	Model setting
P0-20	Operation direction	Ones bit: running direction 0: Run in the default direction 1: Run in the opposite direction to	00

Group P0: Basic functional parameters

Parameter	Name	Setting range	Default value
		the default direction Tens bit: Disable Inversion 0: Invalid 1: Valid	
P0-21	Reverse frequency disable	0: Valid 1: Invalid	0
P0-22	Dead time of forward and reverse rotation	0.0s~3600.0s	0.0s
P0-23	Run-time frequency instruction UP/DOWN benchmark	0: Operating frequency 1: Set frequency	0
P0-25	Motor parameter group selection	0: Motor parameter group 1 1: Motor parameter group 2	0

Group P1: First motor parameters

Parameter	Name	Setting range	Default value
P1-00	Motor type selection	0: Common asynchronous motor	0
P1-01	Motor rated power	0.1KW~650.0KW	Model setting
P1-02	Motor rated voltage	1V~1200V	Model setting
P1-03	Motor rated current	0.01A~655.35A (VFD power ≤55kW) 0.1A~6553.5A (VFD power >55kW)	Model setting
P1-04	Motor rated frequency	0.01Hz~ max output frequency	Model setting
P1-05	Motor rated speed	1rpm~65535rpm	Model setting
P1-06	Asynchronous motor stator resistance	0.001Ω ~ 65.535Ω (VFD power ≤55kW) 0.0001Ω ~ 6.5535Ω (VFD power >55kW)	Tuning parameter
P1-07	Asynchronous motor rotor resistance	0.001Ω ~ 65.535Ω (VFD power ≤55kW) 0.0001Ω ~ 6.5535Ω (VFD power >55kW)	Tuning parameter
P1-08	Leakage inductance of induction motor	0.001mH ~ 655.35mH(VFD power >55kW) 0.001mH ~ 65.535mH (VFD power >55kW)	Tuning parameter
P1-09	Mutual inductance of induction motor	0.01mH ~ 65.35mH (VFD power ≤55kW) 0.001mH ~ 65.35mH (VFD power >55kW)	Tuning parameter
P1-10	No load current of asynchronous motor	0.01A~P1-03 (VFD power ≤55kW) 0.1A~P1-03 (VFD power >55kW)	Tuning parameter
P1-35	Self learning of motor parameters	0: No operation 1: Static self learning 1 2: Motor rotation self-learning 3: Static self learning 2	0

Group P2: Input terminal function parameters

Parameter	Name	Setting range	Default value
		25: Operation pause 26: PLC status reset 27: Run command switch to keyboard 28: Run command switch to communication 29: Torque control prohibited 30: Switch between speed control and torque control 32: PID pause 33: PID reverse direction of action 34: PID integral pause 35: PID parameter switching 36: External fault normally open input 37: External fault normally close input 38: User-defined fault 1 39: User-defined fault 2 40: Motor parameter selection 41: Switch between main frequency X and preset frequency 42: Switch between auxiliary frequency Y and preset frequency 43: Frequency setting effective terminal 44: DC braking 45: Deceleration DC braking 46: Emergency stop 47: External stop terminal (only valid for panel control) 48: External terminal stop (according to deceleration time 4) 49: Reverse run prohibited 50: The running time is cleared 51: Two wire / three wire switching	
P2-55	AI below minimum input setting selection	Hundreds bit: AI3 curve selection, ditto Ones bit: AI1 below minimum input setting selection 0: Corresponding minimum input setting 1: 0.0% Tens bit: AI2 below minimum input setting selection	000
P2-56	AI1 filter time constant	0.00s~10.00s	0.10s
P2-57	AI2 filter time constant	0.00s~10.00s	0.10s
P2-60	AI1 jump point	-100.0%~+100.0%	0.0%
P2-61	AI1 jump range	0.0%~100.0%	0.5%
P2-66	PULSE min setting	0.00kHz~P2-68	0.00kHz
P2-67	PULSE min setting corresponding frequency percentage	-100.0%~+100.0%	0.0%
P2-68	PULSE max setting	P2-66~50.0kHz	50.00kHz
P2-69	PULSE max setting corresponding frequency percentage	-100.0%~+100.0%	100.0%
P2-70	PULSE filter time constant	0.00s~10.00s	0.10s

Group P3: output terminal function parameters

Parameter	Name	Setting range	Default value
		6: AI1 7: AI2 9: PULSE input (100.0% corresponding to 100.0 KHz) 10: Output speed 11: Communication control output 12: Counting value 13: Length	
P3-15	AO1 zero bias coefficient	-100.0%~+100.0%	0.0%
P3-16	AO1 gain	-10.0~+10.0	1.00

Group P4: Start stop mode

Parameter	Name	Setting range	Default value
P4-00	Starting mode	0: Direct start 1: Speed tracking restart 2: Pre-excitation starting (AC asynchronous motor)	0
P4-01	Starting frequency	0.00Hz~10.0Hz	0.00Hz
P4-02	Start frequency duration	0.0s~100.0s	0.0s
P4-03	Percentage of starting DC braking current / pre-excitation current	20%~100%	20%
P4-04	DC braking time / pre-excitation time at start-up	0.0s~100.0s	0.0s
P4-05	Start protection selection	0: No protection 1: Protection	0
P4-06	Speed tracking mode	0: Start from shutdown frequency 1: Starting from power frequency 2: Output (free stop fault) 3: Frequency level detection FDT1 output 4: Frequency level detection FDT2 output 5: Frequency arrival 6: Zero speed operation (no output during shutdown) 7: Zero speed operation 2 (output when shutdown) 8: Upper limit frequency arrival 9: Lower limit frequency arrival (operation related) 10: Motor overload alarm 11: Inverter overload alarm 12: Communication settings 13: In torque limit 14: Frequency 1 reached output 15: Frequency 2 reached output 16: Frequency 3 reached output 17: Current 1 reached output 18: Current 2 reached output 19: Set counting value reached 20: Specified counting value reached 21: Ready for operation 22: AI1 input overrange 24: Under voltage state output 25: Cumulative power on time reached 26: Timing arrival output 27: Length arrived	
P4-07	Speed tracking speed	1~100	20
P4-10	Speed tracking closed loop current	30%~200%	Model confirmed
P4-19	Acceleration and deceleration mode	0: Linear acceleration and deceleration 1: Continuous S-curve acceleration and deceleration 2: Intermittent S-curve acceleration and deceleration	0
P4-20	Time proportion at the beginning of the S curve	0.0%~(100.0% - P4-21)	30.0%
P4-21	Time proportion at the end of the S curve	0.0%~(100.0% - P4-20)	30.0%
P4-22	Stop mode	0: Deceleration stop 1: Free stop	0
P4-23	Starting frequency of DC braking during shutdown	0.00Hz~P0-13	0.00Hz
P4-24	DC braking time during shutdown	0.0s~100.0s	0.0s
P4-25	Percentage of DC braking current when shutdown	0%~100%	0%
P4-26	Waiting time of DC braking during shutdown	0.0s~100.0s	0.0s

Group P5: VF parameters

Parameter	Name	Setting range	Default value
P5-09	VF separated voltage source	0: Digital setting 1: AI1 2: AI2 4: PULSE setting (X4) 5: Communication setting 6: Multi-speed command 7: PID setting 8: Simple PLC operation	0
P5-10	VF separated voltage source digital setting	0-motor rated voltage	0V
P5-11	VF separated voltage acceleration time	0.0s~1000.0s	0.0s
P5-12	VF separated voltage deceleration time	0.0s~1000.0s	0.0s
P5-13	VF separated stop mode selection	0: The frequency voltage reduced to 0 independently 1: When the voltage decreases to zero, the frequency begins to decrease again	0
P5-14	VF slip compensation gain	0.0%~200.0%	0.0%
P5-15	Slip compensation time constant	0.1~10.0s	0.1s
P5-16	VF over excitation gain	0~200	64
P5-17	VF oscillation suppression gain	0~100	Model setting
P5-18	VF oscillation suppression mode selection	0~4	3

P7-65	Detection value of excessive speed deviation	0.0% ~ 50.0%(unit: P0-13)	20.0%
P7-66	Excessive speed deviation detection time	0.0s ~ 60.0s	5.0s
P7-67	Selection of instantaneous stop non-stop function	0: Transient power failure invalid 1: Deceleration in case of instantaneous power failure 2: Deceleration stop in case of instantaneous power failure	0
P7-68	Pause judgement voltage of transient stop action	80%~100%	85%
P7-69	Judgment time of instantaneous stop non-stop voltage rising	0.0s~30.0s	0.5s
P7-70	Judgement voltage of instantaneous stop non-stop action	60%~100% (bus voltage)	80%
P7-71	Proportional gain of instantaneous stop non-stop	0 ~ 100	40
P7-72	Integral coefficient of instantaneous stop non-stop	0 ~ 100	30
P7-73	Deceleration time of instantaneous stop non-stop	0 ~ 300.0s	20.0
P8-01	STOP/REST function	0: Only in keyboard operation mode, STOP/REST key shutdown function is effective 1: In any operation mode, STOP/REST key is effective	1
P8-02	Parameter initialization	0: No operation 1: Restore factory parameters, excluding motor parameters, P0-13 and P0-15 2: Clear record information 3: Restore factory parameters (including motor parameters)	0
P8-03	User password	0~65535	00000
P8-06	Parameter modification attribute	0: Modifiable 1: Not modifiable	0
P8-07	LED operation display parameter 1 (Low 16 bits)	The bit meaning Bit0: Operating frequency Bit1: Setting frequency Bit2: Bus voltage Bit3: Output current Bit4: Output voltage Bit5: Output torque Bit6: Output power Bit7: X input status Bit8: Y output status Bit9: A11 voltage Bit10: A12 voltage Bit12: PULSE input pulse frequency, unit: 0.01kHz Bit13: PULSE input pulse frequency, unit: 1Hz Bit14: PID setting Bit15: PID feedback	001F
P8-08	LED operation display parameter 2 (High 16 bits)	Hundreds bit: PID feedback loss during operation (Err50) 0: free stop 1: stop as stop mode Thousands bit: speed feedback deviation too large (Err52) 0: free stop 1: stop as stop mode Ten thousand bit: motor over speed (Err53) 0: free stop 1: stop as stop mode	0000
P8-29	Protection action selection 4 when fault	Ones bit: motor over temperature (Err54) 0: free stop 1: stop as stop mode	00
P8-30	LED stop display	The bit meaning	0033
